- Opportunities for students
 - Associates in Applied Science – Logistics and Supply Chain Management
 - Level 1 Certification – Warehouse Manager
- College partner – Tarrant County College
- Industry partner – UPS, Lockheed

What is this career field?

- **Logistics management** focuses on the efficient and cost-effective delivery of goods to the customer. It is the process of integration and maintenance (flow and storage) of goods in an organization
- **Supply chain management** targets higher operational performance that will give the business a competitive advantage. It is the coordination and management (movement) of supply chains of an organization.

- **Here are some projected top careers in logistics and supply chain management:**
 - Forecasting/Industry Analyst (Demand Planning Analyst)
 - Operations Manager
 - Distribution center/Warehousing Manager
 - Global Logistics Manager
 - Transportation Director
 - Supply Chain Consultant
 - Procurement Manager

According to workforce studies by Saint Leo University, Florida:

- Forecasting/Industry Analyst (Demand Planning Analyst)
 - Some organizations hire industry analysts to look at the logistics and supply chain management field as a whole in an attempt to identify both current and upcoming trends and processes. This helps them take advantage of the latest logistical innovations and stay more competitive in their field. The Bureau of Labor Statistics (BLS) reports that jobs in market research analysis are expected to grow at a “much faster than average” rate of 18% over the next several years and have a median pay of \$63,790 per year
- Operations Manager
 - Because a company’s operations require having access to the right materials at the right time, operations managers are key players in logistics and supply chain management. Changes in the way a business operates from day to day also change when certain supplies are needed. The BLS shares that operations managers earn a mean wage of \$123,030 annually. Work within the banking industry and you can make considerably more, or closer to \$218,550 per year

According to workforce studies by Saint Leo University, Florida:

- **Distribution Center/Warehousing Manager**
 - Materials and supplies are generally stored at some point in the supply chain process. As a warehousing manager, you would oversee this storage. This often involves using some type of computer-based system to keep track of when materials arrive, where they are located within the facility, and when they leave. Put simply, in this position, you would be responsible for ensuring that items come into and flow out of the warehouse in a timely and efficient manner. This position has an entry level average salary of \$68,197 going to \$120,134 on average with more experience.

According to workforce studies by Saint Leo University, Florida:

- **Global Logistics Manager**
 - Some supply chain management careers involve moving parts and pieces internationally, and a global logistics manager is one. In this role, you will likely be tasked with creating policies and procedures for getting items from one country to another. Keeping up with international shipping and distribution regulations and trends is a must in this position. This is a unique role for someone interested in working with people from all over the world
- **Transportation Director**
 - If an organization moves their own materials from point A to point B, they often employ a transportation director to manage this process. Depending on how the materials are moved, this could involve working with trucking companies, railroads, airlines, and/or water shipping companies. Individuals in transportation management earn a mean annual wage of \$103,320, according to the BLS, with the highest level of employment in the warehousing and storage industry.

According to workforce studies by Saint Leo University, Florida:

- **Supply Chain Consultant**
 - You can also take your MBA in logistics and supply chain management and start your own business as a consultant. Take this route and organizations can hire you to do a thorough review of their supply chain, hopefully exposing ways to increase its efficiency. One major benefit of serving as an independent supply chain consultant is that you have access to a number of different industries. This can keep your work from getting tedious because you're constantly exposed to new supply chains.
- **Procurement Manager**
 - A Procurement Manager, or Purchasing Manager, is responsible for overseeing Supplier relations and transportation details for a company. Their duties include evaluating their employers' brand and target audience to determine what products to order, monitoring delivery times from warehouses or manufacturing plants to retail locations and hiring and training purchasing staff members to carry out purchasing tasks. The average salary for this type of position is \$86,000.

- Free College: Crowley ISD students enrolled in C-ATL receive their dual credit courses and books at no cost, saving about \$350 per class each semester.
- Careers that Pay:
 - The salary range for distribution & logistics careers vary by position and can range from \$58,000- \$123,000.
- Jobs on the Way:
 - The projected growth rate for Logistics and Supply Chain Management career fields are expected to grow 30% from 2020-2030.

If your child wants to pursue this C-ATL Pathway/Program of Study, it is under the “Business & Industry” endorsement.

Contact us so that we can help complete the following:

- a short application to fill out for C-ATL
